Dear class,

I create this tab so you can submit your final project proposal. As I mentioned in class, this should be written in a single PDF file, specifying the following information:

1. The problem/task you want to solve

2. The dataset you plan to use (make sure you can obtain it)

3. The methods that you plan to try

4. The programming languages/library you plan to use

I will review your proposal and comment whether it is accepted or there should be some changes. This proposal will serve as the starting point for you to work on the actual project to be presented and submitted in the end of this class.

The deadline for this proposal is Nov. 5 (11:55pm) and it will account for 5% on your final score (of 30% reserved for the final project). I will grade this proposal mostly based on whether you submit it on time, whether you provide sufficient information, and how doable it is within this term or so.

The late submission policy applies here as the usual assignments.

Thank you.
